Career Objective

I am a web developer with practical experience building full-stack applications using both ASP.NET Core and the Node.js/React ecosystem. I have independently developed and deployed an e-commerce platform integrating Google Gemini AI and dynamic payment processes. Currently, I am seeking an entry-level software developer internship or job to apply my backend and frontend skills to real-world projects, continuously learn new technologies, and pursue a long-term career in software engineering.

Certificate

9- 2022 Microsoft Office Specialize Word
NIIIE's Certificate: B2 English

Education

INFORMATION TECHNOLOGY

NGUYEN TAT THANH UNIVERSITY | NGUYEN TAT THANH INSTITUTE OF INTERNATIONAL EDUCATION (NIIIE)

BACHELOR OF SOFTWARE ENGINEERING Currently
(4th year student)

Experience

Full-Stack Developer — Personal Project (12/2025 – Present)
Nexus E-com | Smart E-commerce Platform & IT Service Hub
Demo: nexus-ecom-git-main-duyn3630s-projects.vercel.app
GitHub: github.com/DUYN3630/nexus-ecom

Technologies: React, Node.js, MongoDB, Tailwind CSS, Redux Toolkit, Gemini API, Chart.js, Vitest, Vercel, Render

Core Architecture & Frontend

- * Performance Optimization: Built a highly responsive frontend using React (Vite) to achieve lightning-fast hot reloading and optimized bundle sizes. Managed complex global states (Cart, Authentication) via Redux Toolkit.

- * Data Visualization: Implemented an enterprise-grade Admin Dashboard using Chart.js to track monthly revenue, active traffic, and staff performance metrics.

- * Modular Architecture: Structured source code cleanly into feature-based modules (features/, store/, layouts/), separating Admin, User, and Expert interfaces for high maintainability and code reusability.

Backend, Security & Cloud Deployment

- * System Design: Engineered a robust Node.js/Express backend following the MVC pattern, decoupling routes and controllers (authRoutes, productRoutes) for seamless feature scalability.

- * Security Hardening: Secured RESTful APIs against common web vulnerabilities by deploying mongo-sanitize to block NoSQL Injection, alongside enforcing strict COOP/COEP security headers.

- * End-to-End Workflows: Developed comprehensive e-commerce workflows, including custom price calculations, dynamic MoMo QR code generation for visual checkout, and a Post-Purchase Hardware Repair/Warranty request system.

- * Cloud Infrastructure: Successfully deployed the scalable architecture using Vercel for the React frontend (leveraging edge caching) and Render for the Node.js backend to ensure high availability.

Data & AI Integration

- * Dynamic AI Configuration: Architected a unique "AI Hub" allowing administrators to dynamically swap AI models (gemini-2.0-flash, gemini-flash-latest) and update system prompt behaviors directly via the dashboard without redeploying code.

- * Smart Customer Support: Integrated Google Gemini API to power context-aware customer support, hardware repair diagnostics (log analysis), and an interactive expert consultation scheduling system.

- * Quality Assurance: Wrote automated tests for both frontend components and backend endpoints utilizing Vitest to ensure system stability and prevent regressions during rapid feature deployments.

Skills

Hard Skills: Languages: JavaScript, HTML, CSS, C#

Frameworks: ReactJS (Vite), Node.js, Express.js (v5+), ASP.NET Core, ASP.NET MVC.

Libraries & State: Redux Toolkit, Mongoose ODM, Framer Motion, Chart.js

Security & Auth: JWT, Google OAuth 2.0, Firebase Admin SDK, mongo-sanitize

AI Integration: Google Generative AI (Gemini API)

Database: MongoDB, SQL Server

Cloud & DevOps: Vercel, Render, Azure

Tools: Git, GitHub, Postman, Vitest, Multer, Nodemailer, Visual Studio

Soft Skills:

Teamwork
Effective
Communication
Problem
Solving
Agile/Scrum
